You are encouraged to be proactive with your care team and ask for catheters to be removed at the earliest possible time that they can be safely

Source: Centers for Disease Control (CDC) National Healthcare Safety Network (NHSN), 4/18/2016

- As measured by Standardized Infection Ratio (SIR)
- SIRs = Number of Observed Infections/Number of Predicted Infections.
- Facilities where the SIR is not statistically different than ONE are categorized as "No Different Than The National Benchmark."
- Facilities where the SIR is statistically higher than one are categorized as "Worse Than The National Benchmark".
- Facilities where the SIR is statistically lower than one are categorized as "Better Than The National Benchmark."
- *Facilities with device days but no SIR are classified as "Too Small to Calculate."
